

DataSync

Fluorine+

DataSync via the **Perspectium Replicator Agent** is a Java-based framework that helps you synchronize your ITSM data with **on-premises databases** and **on-premises applications**. Perspectium provides several handlers that perform base functionality such as taking replicated table data from a ServiceNow instance and writing it to a relational database.

DataSync for ServiceNow

Sync your ServiceNow data to your on-premises database or application using the Perspectium Replicator Agent or Repeater Agent.

Replicator for Salesforce

Sync your Salesforce data to your on-premises database using the Perspectium Replicator Agent.

DataSync for Splunk

Sync events from your ServiceNow instance to Splunk's HTTP Event Collector.

DataSync Agents

DataSync Agents facilitate the transmittal of data from your app to your database. Choose a DataSync Agent for your app-to-database integration from the list of Agents below.

DataSync for Salesforce Agent

DataSync Supported Databases

Have a static data source that you want to sync your ServiceNow or Salesforce data to? Choose your database below to get started.

MySQL

Microsoft SQL Server

Oracle

Snowflake

PostgreSQL

Amazon Redshift

SAP Hana

HP Vertica

IBM DB2
