

ServiceBond

Fluorine+

Perspectium ServiceBond integrations (previously **SIAM integrations**) are frameworks for multidirectional syncing of cloud application data. ServiceBond integrations are handled by the **Perspectium Mesh**, which routes data to connected application endpoints. You can also set up data integration with on-premises applications and databases using Perspectium's [Repeater Agent](#).

And to help you track the status of and troubleshoot your Service Integration messages, **Data Guarantee** creates receipts for dynamic shares and bulk shared data.

To get started, choose a Perspectium-supported ServiceBond application from the list below:

[Amazon Web Services \(AWS\)](#)

[ServiceNow](#)

[Jira](#)

[Freshservice](#)

[Freshdesk](#)

[Ivanti](#)

[CA Rally](#)

[BMC Remedy](#)

[Cherwell](#)

[Microsoft SharePoint](#)

[OpsRamp](#)

[Zendesk](#)

[NetSuite](#)
