

Create a custom Correlation ID field for Ivanti

Fluorine+

To correlate your Ivanti Service Manager incidents with another ITSM app, you will need to create a **Correlation ID** field in the table whose data you are sharing out.

Prerequisites

⚠ First, you will need to [create your Ivanti integrations](#) and [create Ivanti web service script actions](#).

⚠ You will also need to [create your Ivanti business rules](#).

Procedure

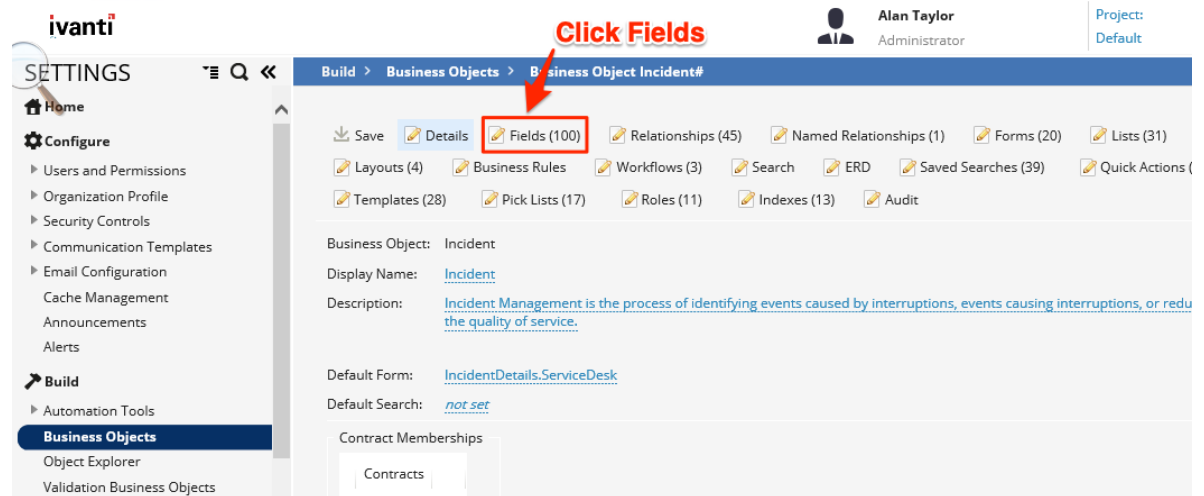

To create a custom Correlation ID in the table whose data you want to share out of Ivanti Service Manager, follow these steps:

1

Navigate to Fields for your table

Log into Ivanti Service Manager and click the  in the upper right-hand corner of the screen to access your settings. Then, on the left-hand side **Settings** panel, navigate to **Business Objects** (under **Build**). On the resulting page, click the **Incident** table icon to access business objects for the incident table. Finally, in the upper right-hand corner of the resulting page, click **Fields**.

NOTE: This setup assumes you will sync data from your Ivanti incident table. To sync other data from Ivanti, contact [Perspectium Support](#) for a guided setup.

2

Add the Correlation ID field

Directly above the list of **Field Names**, click **Add new...** and select **Text** for the field type in the popup window. On the resulting page, enter/choose the information according to the list shown below.

Name: correlation_id

Display Name: Correlation ID

Description: Perspectium common incident correlation

Text Length: Fixed, 1000

Field Attributes: Nullable, Stored

Finally, click **Add This Field** at the bottom left-hand corner of the window to create the Correlation ID field.
