

On-demand DataSync

Fluorine+

Perspectium On-demand DataSync for ServiceNow sends your ServiceNow data in bulk to your **Amazon Web Services (AWS)** account and instantly provisions an AWS EC2 instance and AWS Relational Database Service (RDS). With On-demand DataSync, you can preconfigure your ServiceNow data to load specific data sets and automatically create and maintain schema in your AWS Relational Database Service (RDS) instance.

Get started with On-demand DataSync

Perspectium On-demand DataSync for ServiceNow allows you to set up end-to-end provisioning of ServiceNow incident data into your Amazon Web Services (AWS) account. Plus, you can leverage preconfigured data visualizations from your connected AWS RDS with **Incident Analytics**.
