

Service Provider Gateway

Fluorine+

Service Provider Gateway is a Perspectium integration solution that enables service providers to rapidly onboard customers via integration templates that set up the eBonding of customers' ITSM apps to the service provider's Gateway app. These Service Provider Gateway integration templates include default mappings for various Service Management systems and modules. All mappings and conditions for eBonding with customer apps are configurable and can be modified and cloned to build a repeatable integration blueprint. Gateway domains are also leveraged to trigger the eBonding of records with customers.
