

# Share only updated fields

Fluorine+

To [dynamic share](#) out only the fields of a record that have been updated, instead of re-sending your entire record when there is an update, you can enable the **Share only updated fields** option under the **Filter and Enrichment** tab. Enabling this feature can be useful when your sharing (source) instance is updated frequently but your subscribing (target) instance(s) are more or less static.

## Prerequisites

⚠ First, you will need to [create a ServiceNow dynamic share](#).

## Procedure

To dynamic share out only the fields of a record that have been updated, follow these steps:

1

### Access your dynamic share

Log into your sharing ServiceNow instance and navigate to **Perspectium > Replicator > Dynamic Share**. Then, click into the dynamic share that you want to share only updated fields.

2

### Check Share only updated fields

Click the **Filter and Enrichment** tab. Then, check the **Share only updated fields** box.

3

### Choose system and ID fields to share (optional)

Checking the **Share system fields** box will share out the following fields with your updated field(s) in the same outbound message:

- **sys\_created\_by**
- **sys\_created\_on**
- **sys\_mod\_count**
- **sys\_updated\_by**
- **sys\_updated\_on**

You can also choose an **ID field** that will always be dynamic shared out with your updated field(s). The default ID field that will be dynamic shared out is the **sys\_id** field.

4

### Click update

Near the bottom left-hand corner of the form, click **Update** to save the changes to your dynamic share.
