

View dynamic share domain and scope

Fluorine+

On [domain-separated ServiceNow instances](#), dynamic shares are defined in [ServiceNow's domain picker](#), and data will only be dynamic shared within that selected domain.

Prerequisites

First, you will need to follow the steps to [get started with Replicator](#) and [create a dynamic share](#).

Procedure

To view the domain and scope for dynamic share [business rules](#), follow these steps:

1

Log into your domain-separated ServiceNow instance and navigate to **Perspectium > Replicator > Dynamic Share**.

2

Click the **Business Rule** tab. The domain for your dynamic share's business rules will be displayed in the **Domain** field.

The screenshot shows the ServiceNow Service Management console. The left sidebar has a search bar with 'dynamic share' and a list of items under 'Perspectium': 'Replicator', 'Dynamic Share', 'Dynamic Share Rules Dashboard', and 'Reset Dynamic Share Rules'. The main panel is titled 'Replicator Configuration - Ready to Run dev59466_test_agent [Shared view]'. It contains fields for Name, Table, Group Share, Active, Direction, Shared Records, Cipher, Advanced, and Test With. Below these is a tabbed interface with 'Business Rule' selected. The 'Business Rule' tab shows 'Perspectium Replicate' for the Business Rule, 'global' for the Domain, and 'Global' for the Application. A red arrow points to the 'Business Rule' tab with the text 'View the domain for your dynamic share business rules'.
