

Share child class only

Fluorine+

The **Share child class only** option for [ServiceNow bulk shares](#) enables the sharing of only the child record of the record created. For instance, if you are sharing the `cmdb_ci` table (as indicated in green in the image below), you will only share the child records that are the lowest descendants on the parent-child hierarchy (as indicated in red in the image below) and **not** the parent records.

i The Share child class only option is enabled by default and should be always be used when replicating to another ServiceNow instance. This will ensure the proper chain is created by ServiceNow.

If you uncheck this option, you will bulk share only the base records for the selected table.

To disable the bulk sharing of child records and bulk share only base table records, follow these steps:

Prerequisites

! First, you will need to follow the steps to [get started with Replicator for ServiceNow](#) and [create a ServiceNow bulk share](#).

Procedure

1

Log into your sharing ServiceNow instance and navigate to **Perspectium > Replicator > Bulk Share** or simply type and then click **Bulk Share** in the Filter Navigator on the upper left-hand side of the screen.

2

Click the name of the bulk share that you want to disable the bulk sharing of child records for.

3

Scroll down the to **Additional Settings** tab. Then, uncheck the **Share child class only** box to stop bulk sharing associated child records.

4

In the bottom left-hand corner of the form, click **Update** to save your changes.

The screenshot shows the ServiceNow Service Automation interface for configuring a Bulk Share named 'test124'. The left sidebar lists various Replicator configurations. The main panel shows basic settings like Name, Table name, and Status. The 'Additional Settings' tab is selected, displaying options for including attachments, embedded images/videos, journal fields, audit log, history set, and child class sharing. A red arrow points to the 'Share child class only' checkbox, which is currently checked. Below the tabs are buttons for Update, Execute Now, and Delete.

Uncheck to
stop bulk sharing child records
