

Run your bulk share again

Fluorine+

Once a bulk share has a status of **Completed**, an option will become available to run that same bulk share again. You may want to run the same bulk share multiple times if your intent is to migrate the same table data intermittently.

Prerequisites

⚠ First, you will need to follow the steps to [get started with Replicator](#) and [create a bulk share](#).

Procedure

To run your bulk share again, follow these steps:

1

Log into your sharing ServiceNow instance and navigate to **Perspectium > Replicator > Bulk Share** or simply type and then click **Bulk Share** in the Filter Navigator on the upper left-hand side of the screen.

2

Click into the bulk share with a **Completed** status that you want to run again.

3

In the upper right-hand corner of the form, click **Execute Again**. You will then be redirected to your list of bulk shares, and your completed bulk share will run again.

The screenshot shows the ServiceNow interface for a Bulk Share. The breadcrumb navigation is **Perspectium > Replicator > Bulk Share**. The form displays details for a bulk share named "Ready to Run dev59466_test_a" with a status of "Completed". The table name is "Incident [incident]". The form includes fields for "Records" (179), "Records per second" (9.42), and "Group Share". The "Execute Again" button is highlighted with a red box and a red arrow. A red text overlay says "Click to run your bulk share again".
