

# View names

Fluorine+

By default, [dynamic shares](#) and [bulk shares](#) will share all fields available in a table. However, there are times when you want to control the number of fields being shared from your ServiceNow table. By **creating a form view**, you can limit the fields that will be dynamic/bulk shared to only those that appear on the form view that you have personalized. For more information on creating form views, see [personalize a form](#).

## Prerequisites

 First, you will need to create a dynamic share or create a bulk share.

## Share fields in a specific form view only

To set up your dynamic/bulk share to share only the fields present in a specific form view, follow these steps:

1

### Access your dynamic share or bulk share

Log into your sharing (source) ServiceNow instance and navigate to **Perspectium > Replicator > Dynamic Share** or **Bulk Share**. Then, click into the dynamic share or bulk share that you want to create a view name for.

2

### Type a view name

Scroll down to the **Additional Settings** tab. Then, type your form view name in the **View name** field (e.g., Type **ess** for the **Self-Service** form view).

3

### Click Update

Near the bottom left-hand corner of the form (just above **Related Links**), click **Update** to save the changes to your dynamic share or bulk share.
