

Table Compare

Fluorine+

The **Table Compare** and **SNC Table Compare** modules (under **Perspectium > Replicator**) allow you to compare a table on your ServiceNow instance with the tables in another database (**Table Compare** module) or another ServiceNow instance (**SNC Table Compare** module). By comparing two tables, you can see each table's record count as well as a list of record discrepancies by sys_id between the two tables that you are comparing (i.e. which records exist in one table and not in the other).

ServiceNow to ServiceNow Table Compare

To learn how to run a table compare for two ServiceNow instances via InstanceSync for ServiceNow, see [SNC Table Compare](#).

ServiceNow to Database Table Compare

To learn how to run a table compare for a ServiceNow instance and a database via DataSync for ServiceNow, see [Table Compare \(Table Stats\)](#).
