Filter conditions

**Fluorine+**

For ServiceNow dynamic shares, bulk shares, and table maps, you can create **filter conditions** to share data only when certain conditions are met. Table map filter conditions can be created per source field either with the ServiceNow condition builder or programatically. For more information about creating filter conditions in ServiceNow, see condition builder.

Prerequisites

⚠️ First, you will need to create a ServiceNow dynamic share, create a ServiceNow bulk share, or set up a ServiceBond integration.

Create filter conditions for a ServiceNow dynamic share or bulk share

To create filter conditions for a ServiceNow dynamic share or bulk share, follow these steps:

1

Access your dynamic share or bulk share

Log into your sharing ServiceNow instance and navigate to **Perspectium** > **Replicator** > **Dynamic Share** or **Perspectium** > **Replicator** > **Bulk Share**. Then, click into the dynamic share or bulk share that you want to create filter conditions for.

2

Build your conditions

Click the **Filter and Enrichment** tab. Choose a field to filter on from the **choose field** dropdown. Then, add an **operator** for your filter condition statement (For a list of ServiceNow operators and their descriptions, see operators available for filters and queries). Finally, enter/select a value for your filter condition statement.

3

Save your changes

Near the bottom left-hand corner of the form (just above **Related Links**), click **Update** to save the changes to your dynamic share.

Create filter conditions for a ServiceNow table map

To create filter conditions for a ServiceNow table map, follow these steps:
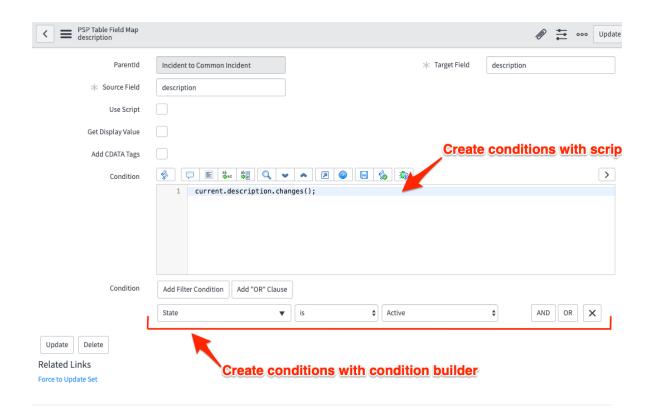

1

Access your table map

Log into your sharing ServiceNow instance and navigate to **Perspectium** > **Control and Configuration** > **Table Maps**. Then, click into the name of the table map that you want to create filter conditions for.

2

Build your conditions

Scroll down to the **PSP Table Field Maps** tab. Then, locate and click into the name of the source field that you want to create filter conditions for. You can create conditions for your source field either by typing a script in the scripting window or using the ServiceNow condition builder below the scripting window. For more information about creating filter conditions in ServiceNow, see condition builder.

PSP Table Field Map description				📎 ⇄ ∘∘∘ Update
