

DataSync Agent

Gold

The **Perspectium DataSync Agent (previously Replicator Agent)** is a standalone agent that listens for, transforms, and routes data messages that are shared from ITSM applications to on-premises data stores. With the DataSync Agent, you can easily share live data in real time as it is being created and/or updated (dynamic share) or share in bulk data at scheduled intervals that you can specify (bulk share).

After installing the DataSync Agent, you will be able to share data to on-premises databases. Perspectium provides several handlers that perform base functionality such as taking replicated table data from a ServiceNow instance and writing it to a relational database.

Get Started with DataSync Agent

Sync your ServiceNow data to your on-premises database or application using the Perspectium DataSync Agent or Repeater Agent.

DataSync Agent for Salesforce

Sync your Salesforce data to your on-premises database using the Perspectium DataSync Agent.
