

# ServiceNow shared and subscribed queues

Gold

**Shared queues** contain outbound messages for data that is dynamic shared or bulk shared out of your ServiceNow instance. **Subscribed queues** contain inbound messages for data coming into an application instance or database. A default subscribed queue is also created in your ServiceNow instance when you [install DataSync for ServiceNow](#).

To configure your shared queues and subscribed queues in ServiceNow, you will need to input your Perspective Mesh (MBS) login information.
