

Import/export alert definitions

Gold

The **alert definitions** for Observer contain data about how alerts are defined and posted. The default alert definitions are loaded when you first [install Observer](#). However, you can **export the alert definitions from one ServiceNow instance and import them to another ServiceNow instance**. You can also export alert definitions if you want to make changes to those definitions without affecting your current view in Observer.

Procedure

To export existing alert definitions to a **.JSON** or **.CSV** file, follow these steps:

1. Log into Observer and click  > **Monitor** to navigate to the **Monitor** page.
2. In the upper left-hand corner of the page, click  >  . You can then choose to download as either a **.JSON** or **.CSV** file.

To import **.JSON** or **.CSV** alert definitions to another instance of Observer, follow these steps:

1. Log into Observer and click  > **Monitor** to navigate to the **Monitor** page.
2. In the upper left-hand corner of the page, click  >  .
