

Run a bulk share

Gold

The **Run a Bulk Share** button allows you to schedule a bulk share to run for this table. This can be useful for when you create a dynamic share and want to initially seed the subscriber (another instance or database) with the table's data.

Pressing this button will save the dynamic share and schedule a bulk share to be run. The bulk share will honor the dynamic share's configurations where relevant such as include journal fields, include attachments and filter conditions. The bulk share will be related to this dynamic share so you can see it in the dynamic share's related list

Prerequisites

⚠ First, you will need to follow the steps to [create a dynamic share](#).

Procedure

To run a bulk share from an existing dynamic share, follow these steps:

1

Access dynamic share

Log into your sharing ServiceNow instance and navigate to **Perspectium > Replicator > Dynamic Share** or simply type and then click **Dynamic Share** in the Filter Navigator on the upper left-hand side of the screen.

Click into the dynamic share you want to run as a bulk share or click **New**.

2

Run a bulk share

In the upper right-hand corner of the form, click **Run a Bulk Share**.

The screenshot shows the ServiceNow interface for configuring a dynamic share. The breadcrumb navigation is **Perspectium > Replicator > Dynamic Share**. The form title is **Replicator Configuration - test [Shared view*]**. The **Run a Bulk Share** button is highlighted with a red box and a red arrow. A red text annotation points to the button: **Click to run a bulk share with your dynamic share configurations**. The form fields include:

- Name: Incident Dynamic Share
- Table: Incident [Incident]
- Group Share: (empty)
- Active:
- Direction: Share
- Encryption Method: Base64 Encode Only
- Advanced:
- Test With: (empty)

The **Business Rule** tab is selected, showing the following settings:

- Interactive only:
- Business Rule When: after
- * Business Rule Order: 50
- Update or Insert:
- Share base table only:
- Include all child tables:
- Create:
- Update:
- Delete:
- Delete On Class Change:

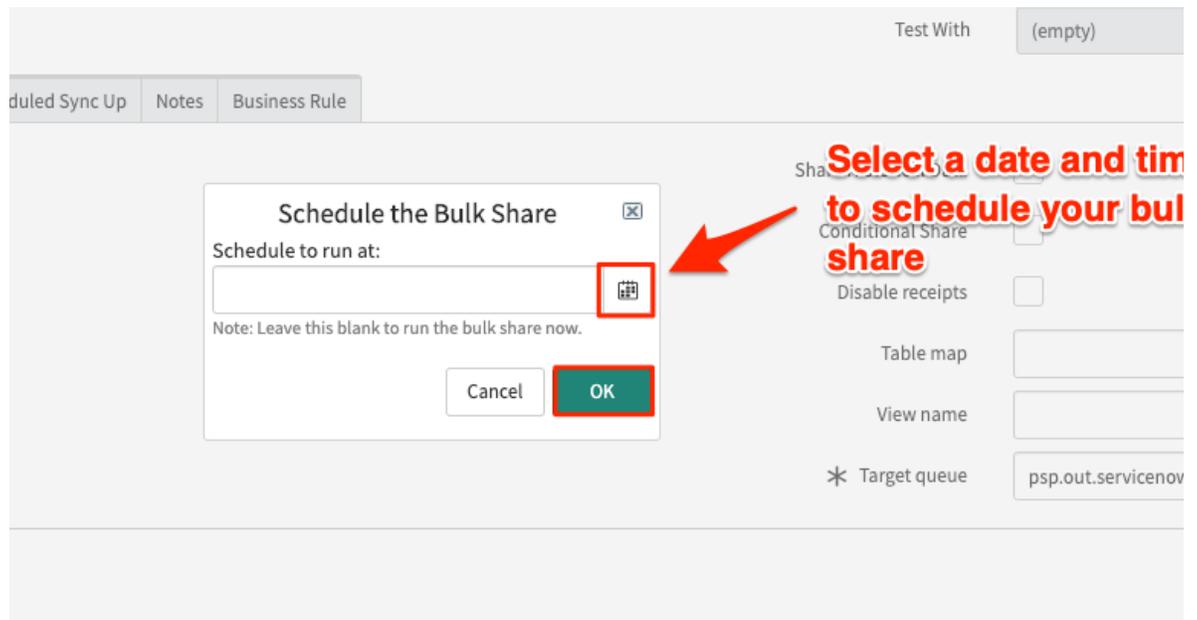

Buttons at the bottom of the form include **Update**, **Run a Bulk Share**, **Test Record**, and **Delete**.

3

Select when to run bulk share

A modal window will appear. Click  to select the date and time to schedule your bulk share. If you want to run the bulk share now, leave **Schedule to run at** empty. Click **OK** when you are done. A bulk share with the dynamic share configurations will be scheduled or run.

NOTE: The dynamic share will save at its current state, i.e. if active is selected, the dynamic share will save as activated.
