

DataSync

Gold

Perspectium DataSync is an expert data integration solution comprising of a ServiceNow application, the **Perspectium Integration Mesh**, and an on-premise agent or cloud to fulfill automated datastore, ServiceNow instance and other Perspectium supported platform synchronization, and big data replications.

Perspectium DataSync's features ranges from the following:

- Automated Datastore creation and real time modification of schema
- On-premise or cloud datastore compatibility
- Built in encryption at rest and data obfuscation feature
- Fully managed availability and throughput monitoring with OLA definition
- End-to-end services enablement

DataSync for ServiceNow (Replicator)

Sync your ServiceNow data to your on-premises database or application using the Perspectium Replicator Agent or Repeater Agent.

Replicator for Salesforce

Sync your Salesforce data to your on-premises database using the Perspectium Replicator Agent.

DataSync for Splunk

Sync events from your ServiceNow instance to Splunk's HTTP Event Collector.
