

DataSync

Perspectium DataSync is an expert data integration solution that allows your organization to seamlessly move data from one application to another. It is comprised of a ServiceNow application, the **Perspectium Integration Mesh**, and an on-premise agent or cloud to fulfill automated datastore.

Perspectium DataSync's features include:

- Automated Datastore creation and real time modification of schema
- On-premise or cloud datastore compatibility
- Built in encryption at rest and data obfuscation feature
- Fully managed availability and throughput monitoring with OLA definition
- End-to-end services enablement
