

# How to Use DataSync for ServiceNow

The Perspectium application is comprised of various modules that you can choose to configure.

These modules can be broken into categories, which are outlined below. Explore the different modules to learn about what they can offer.

Control and Configuration modules	Perspectium Core modules
<a href="#">Properties</a>	<a href="#">Dashboard</a>
<a href="#">Start / Stop All Jobs</a>	<a href="#">Shares</a>
<a href="#">All Scheduled Jobs</a>	<a href="#">Shared Queues</a>
<a href="#">Table Maps</a>	<a href="#">Subscribe</a>
<a href="#">Troubleshooting</a>	<a href="#">Subscribed Queues</a>
	<a href="#">Tools</a>
Advanced modules	Messages modules
<a href="#">Script Includes</a>	<a href="#">Outbound</a>
<a href="#">Business Rules</a>	<a href="#">Inbound</a>
<a href="#">UI Pages</a>	
<a href="#">Switch to Legacy UI</a>	
<a href="#">EULA</a>	

Not sure where to find these modules? In your ServiceNow instance, in the left navigation menu, type **Perspectium**, and you'll see the modules appear as shown in the image below.
