

Meshlets with DataSync

Gold

A meshlet is a Perspectium application that helps in integrating Perspectium-supported applications for data storage. Each meshlet is a self-contained application that connects to the Mesh Message Queue Service (MQS) to read and write messages to the queues.

See how meshlets are used in [Service Gateway](#) here.

Meshlet Minimum System Requirements for Service Gateway

Learn what requirements you need to get started with using meshlet for your integration.
