

Get Started with DataSync

The procedures below is just one of the common ways to get started with **Perspectium DataSync**. How you will set up your environment will depend on which type of **DataSync** integration you are doing. The example below shows you how to set up your ServiceNow instance with the **Perspectium for ServiceNow** application and how to set up **DataSync Agent** to your own environment.

For other ways to get started with **DataSync**, click [here](#) or contact [Perspectium Support](#).

Prerequisites

 First, request for the downloadable link for **Perspectium for ServiceNow** application.

[blocked URL](#) Make sure that the device you are installing the **DataSync Agent** on meets [these basic requirements](#).

[blocked URL](#) You will also need to request the **Agent Installer** from [Perspectium Support](#).

 You will need the following information from [Perspectium Support](#):

- Perspectium Integration Mesh (MBS) server URL
- Integration Mesh (MBS) username
- Integration Mesh (MBS) password

Procedure

To get started with setting up your ServiceNow instance with **Perspectium for ServiceNow** and to set up **DataSync Agent** to your own environment, follow the procedures below:

1

ServiceNow Perspectium Application

1

Download Perspectium for ServiceNow (Replicator)

Download the update set for **Perspectium for ServiceNow** with the link sent to you from [Perspectium Support](#).

2

Install Perspectium Application

3

Run Perspectium Finish Install scripts

4

Set initial Perspectium & Replicator properties in ServiceNow

5

Share display values

2

Perspectium DataSync Agent

 **NOTE:** The **DataSync Agent** can be installed on the Database server or on a stand-alone system.

1

Download DataSync Agent

Download **DataSync Agent** with the **Agent Installer** sent to you from [Perspectium Support](#).

2

Install the DataSync Agent

Follow the procedures listed to the link above. After completing the installation, follow the step to **Validate your Agent** configuration. Although this is optional, it is highly recommend to confirm that your Agent is configured correctly. Running the **validateConfiguration** tool will run three functional checks to ensure your agent can connect to your ServiceNow instance schema, can connect to the Perspectium Mesh (HTTPS/443), and can connect to your database server.

3

Start/stop the DataSync Agent
