

Generate unique names for business rules associated with dynamic shares

Gold

Upon the initial creation of a dynamic share, you can choose between using [Business Rule](#) or [Flow Designer](#). When you choose **Business Rule**, the dynamic share uses [business rules](#) to trigger sharing records out. By default, the business rule created is named **Perspectium Replicate**. With enabling **Generate unique names for the business rules associated with dynamic shares** option, the business rules that will be created will have a unique name instead.

Prerequisites

[blocked URL](#) First, you will need to [install DataSync for ServiceNow](#) and [run the Perspectium Finish Install scripts](#).

Procedure

To generate unique names for the business rules associated with dynamic shares, follow these steps:

1

Access DataSync (Replicator) Properties

Log into your sharing ServiceNow instance and navigate to **Perspectium > DataSync > Properties**.

2

Enable unique names

Check the box labeled **Generate unique names for the business rules associated with dynamic shares**. Then, scroll down to the bottom of the page and click **Save** to save your changes.
