

Bond Azure DevOps with another app

After completing the initial steps to set up Azure DevOps for a ServiceBond integration, you will need to bond Azure DevOps with another app to finish configuring your integration.

The instructions and information provided are for bonding Azure DevOps with [ServiceNow](#). If you are trying to bond Azure DevOps with another ITSM app, contact [Perspectium Support](#) for a guided setup.

Bond Azure DevOps with ServiceNow

To sync your Azure DevOps tasks and map Azure DevOps task fields with ServiceNow records, complete the following procedures:

1

[Create a ServiceNow dynamic share](#)

2

[Create a ServiceNow subscribed queue](#)

3

[Add and edit ServiceNow outbound table map fields](#)

4

[Add and edit ServiceNow transform map scripts](#)
