

# Dashboard for ServiceNow

**Perspectium Dashboard for ServiceNow** provides a common view into the performance, processing and availability information related to all your Perspectium components across your family of ServiceNow instances and Replicator Agents.

The Dashboard is a web application that allows you to see a real-time snapshot of how your family of ServiceNow instances are performing in one "dashboard" (page) as well as view the number of records being replicated between your instances and agents. Additionally, it runs in the Perspectium Cloud Server leveraging MBS to query Observer for your instances as well as the current status of your replication. This data is then displayed in a web user interface setup by Perspectium as part of the [On-boarding Service](#) to using Perspectium software and services.

Explore the following link for everything you need to know about this feature.

## Using the Perspectium Dashboard for ServiceNow
