

# Shares

The **Shares** module contains the different options for sharing out your data from one application to another.

To access these features, go to **Perspectium > Perspectium Core > Shares** in your ServiceNow instance.

In the following sections, you'll find more context on each type of share, instructions on setting them up, and additional features for using shares.

- [Dynamic Share](#)
- [Bulk Share](#) and [Scheduled Bulk Share](#)
- [Group Share](#)

## Shares

DataSync has a variety of sharing options for sending records out of your ServiceNow instance. Replicate and synchronize record informations from multiple tables to a destination of your choice with the following sharing options. To get started with your DataSync integration, select one of the options available.

To learn more about these options, visit our [documentation](#).

### Dynamic Share

Send records out of your instance as they are created, updated, and/or deleted.

### Bulk Share

Send a snapshot of data at a point in time from your instance.

### Scheduled Bulk Share

Schedule one or more bulk shares to run at a time you choose.

### Group Share

Select the tables you want to share and control them in one location.
