Snapshot

DataSync Snapshot reliably and comprehensively backs up ServiceNow objects and data without impacting performance, and all from within the **Perspectium DataSync application**.

With **DataSync Snapshot**, you can:

- Securely backup entire objects - restore applications along with their data
- Recover into other instances - enabling application migration without update sets
- Complete data recovery including metadata, attachments, related records, etc.
- Recover deleted records and fields to any point in time, no matter when it was lost
- Maintain referential integrity - preserves parent-child and recursive relationships

Get started with Snapshot

Follow these steps to set up and starting using Snapshot.
