Release Names and Packaging

The releases name are in the format of **<Major>.<Minor/Patch>.<Hotfix>**. The contents of a release package are based on the name and are as follows:

Format	Description
Major	Version of the software that contains significant new features, enhancements, and/or improvements in the user interface (UI) or user experience (UX). Perspectium's release name follows the chemical elements (e.g. Iodine) and are released alphabetically. For example, **Iodine 7.0.0** is the major release following Helium.
Minor /Patch	A set of changes that contains updates, bug fixes, and/or improvements on the product. This release version **can** be installed by itself without a major release. (e.g. **Iodine 7.1.0**)
Hotfix	A set of changes that addresses a specific issue. This release version **cannot** be installed by itself, it will need to be uploaded on top of a major or patch release. Hotfixes are cumulative so hotfix 2 will contain fixes in hotfix 1. (e.g. **Iodine 7.0.1** also known as Iodine Hotfix 1)

Release Compatibility

Perspectium tests **n-2** compatibility with each release e.g. the previous two major releases of the Agent prior to this release has been tested with the latest version of the ServiceNow application.
