

Core User Interface

Currently, there are two **DataSync for ServiceNow** (Core) user interface (UI) you can choose from. See below which experience fits you!

What's on this page?

- [He20](#)
- [Legacy](#)

He20

The He20 interface is a redesigned UI that improves your experience to better navigate through the features you use.

- Navigator list are condensed and organized to its proper category.
- Features are organized into one location. For example, all sharing options such as bulk share, dynamic share, and group share are all in the [Shares](#) UI page.
- Breadcrumbs and back button added to each applicable UI page.

Starting with the Iodine 7.0.0 release, the He20 UI will be automatically applied to your ServiceNow instance.

Shares

DataSync has a variety of sharing options for sending records out of your ServiceNow instance. Replicate and synchronize record information from multiple tables to a destination of your choice with the following sharing options. To get started with your DataSync integration, select one of the options available.

To learn more about these options, visit our [documentation](#).

Dynamic Share
Send records out of your instance as they are created, updated, and/or deleted.

Bulk Share
Send a snapshot of data at a point in time from your instance.

Scheduled Bulk Share
Schedule one or more bulk shares to run at a time you choose.

Group Share
Select the tables you want to share and control them in one location.

← **Dynamic Share**

Dynamic share sends records out of your instance as they are created, updated, and/or deleted. Create and control the format, conditions, and destination for each record shared.

To learn more about the functionality of dynamic shares, click [here](#) to visit our documentation.

Create New Dynamic Share

Create a new dynamic share record.

View Dynamic Shares

View and manage your dynamic share records.

Reset Dynamic Share Business Rules

For dynamic shares using business rules, reset these rules for scenarios where the business rules become out of sync or are not firing properly.

Dynamic Share Business Rules Dashboard

View information about the business rules created by dynamic shares using business rules.

Data Obfuscation Dashboard

View the obfuscation rules created for dynamic shares and bulk shares.

Additionally, see the different form views available for bulk and dynamic shares with [Switch form views](#).

Legacy

The Legacy interface provides the look that dates back from the very first release of the Perspectium Core, Argon (1.0.0), to Gold (5.0.0).

Starting with the Iodine 7.0.0 release, the Legacy UI will not be accessible. If you would like to use the Legacy interface, contact [Perspectium Support](#).
