

InstanceSync for ServiceNow manual setup

Fluorine

To manually set up **InstanceSync for ServiceNow**, you will need to install and configure **Perspectium Replicator for ServiceNow** on a **sharing (source) instance** and **subscribing (target) instance**.

Procedure

To manually setup InstanceSync for ServiceNow in your ServiceNow source and target instances, complete the following steps:

1

Install Replicator for ServiceNow

2

Run the Finish Install scripts

3

Set your initial Perspectium and Replicator properties

4

Create a shared queue

5

Create a dynamic share or create a bulk share

6

Configure another ServiceNow instance as a subscriber
