Ready to Run

Fluorine

Ready to Run is a feature of the Perspectium Replicator application that allows you to easily create dynamic and bulk shares on the same screen.

Prerequisites

⚠ First, you will need to install Replicator for ServiceNow.

⚠ You will also need to set your initial Perspectium & Replicator properties.

Procedure

To create dynamic share and bulk shares with Ready to Run, follow these steps:

1 Log into your sharing ServiceNow instance and navigate to **Perspectium** > **Replicator** > **Ready to Run**.

2 From the **Select a Configuration Type** dropdown, choose **Create Shares**.

3 Type any name for the **Task Name**. Your Perspectium MBS login information will populate automatically.
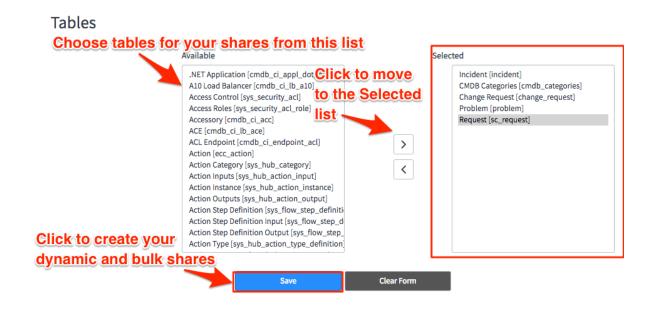

4 Scroll down to the **Tables** section. Select the tables you want to create dynamic and bulk shares for from the **Available** list and then use the right-arrow icon to move those tables to the **Selected** list.

ℹ **NOTE:** If you have made errors with any of your Ready to Run configurations at this point, you can click the **Clear Form** button at the bottom right of the form to clear the form and start over.

5 Click the **Save** button at the bottom of the form to finish creating your shares. You can confirm that your shares have been created and make additional configurations to them by navigating to **Perspectium** > **Replicator** > **Dynamic Share** and **Perspectium** > **Replicator** > **Bulk Share**.
