

Share historical data

Fluorine

Historical data fields refer to fields that were created or updated prior to running your initial dynamic share. For dynamic shares, an option to **Share Historical Data** will allow for the sharing of the following historical data fields to other ServiceNow instances:

- [Journal fields \(work notes and comments\)](#)
- [Attachments](#)
- [Audit logs](#)

Prerequisites

 You will first need to follow the steps to [get started with Replicator](#) and [create a dynamic share](#).

Procedure

To share historical data for a dynamic share, follow these steps:

1

Log into your sharing (source) ServiceNow instance and navigate to **Perspectium > Replicator > Dynamic Share**.

2

Click into the dynamic share that you want to share historical data for.

3

Click the **Additional Settings** tab. Then, check the **Share Historical Data** box.

4

In the upper right-hand corner of the form, click **Update** to save your changes.
