

Disable bulk sharing of child records

Fluorine

The **Include child only** option for bulk shares enables the sharing of child records that are directly associated with the table selected from the **Table name** dropdown. For instance, if you are sharing the **cmdb_ci** table (as indicated in green in the image below), you will also share associated child records that are the lowest descendants on the parent-child hierarchy (as indicated in red in the image below).

The Include child only option is enabled by default. If you uncheck this option, you will bulk share only the base records for the selected table.

Prerequisites

⚠ First, you will need to follow the steps to [get started with Replicator](#) and [create a bulk share](#).

Procedure

To disable the bulk sharing of child records and bulk share only base table records, follow these steps:

1

Log into your sharing ServiceNow instance and navigate to **Perspectium > Replicator > Bulk Share** or simply type and then click **Bulk Share** in the Filter Navigator on the upper left-hand side of the screen.

2

Click the name of the bulk share that you want to disable the bulk sharing of child records for.

3

Scroll down the to **Additional Settings** tab. Then, uncheck the **Share child class only** box to stop bulk sharing associated child records.

4

In the bottom left-hand corner of the form, click **Update** to save your changes.

The screenshot shows the ServiceNow interface for configuring a Bulk Share. The left sidebar lists navigation options like 'Bulk Share' and 'Scheduled Bulk Shares'. The main form displays details for a Bulk Share named 'test124', including its table name 'Ticket [ticket]' and various settings. The 'Additional Settings' tab is selected, showing checkboxes for 'Include attachments', 'Include embedded images/videos', 'Include journal fields', 'Include audit log', 'Include history set', 'Share child class only', 'Include all child tables', and 'Include referenced field records'. The 'Share child class only' checkbox is currently checked, and a red arrow points to it with the text 'Uncheck to stop bulk sharing child records'. Other settings include 'Conditional share', 'Insert only', 'Table map', 'View name', 'Target queue', 'Run schedule', and 'Encryption Method'. The 'Update' button at the bottom left is highlighted with a red box.
