ServiceBond

Fluorine

Perspectium ServiceBond integrations (previously **SIAM integrations**) are frameworks for multidirectional syncing of cloud application data. ServiceBond integrations are handled by the **Perspectium Mesh**, which routes data to connected application endpoints. You can also set up data integration with on-premises applications and databases using Perspectium's Repeater Agent.

And to help you track the status of and troubleshoot your Service Integration messages, **Data Guarantee** creates receipts for dynamic shares and bulk shared data.

To get started, choose a Perspectium-supported ServiceBond application from the list below:

Amazon Web Services (AWS)

Jira

ServiceNow

Freshservice

Freshdesk

Ivanti

CA Rally

BMC Remedy

Cherwell

Microsoft SharePoint

OpsRamp

Zendesk

NetSuite
