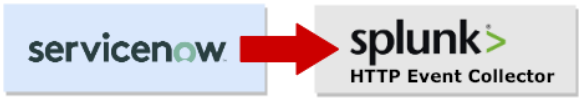
# DataSync for Splunk

Fluorine

**Splunk HTTP Event Collector** can be used to aggregate and analyze data from your ServiceNow instance by sending data over the HTTP protocol using a token-based authentication model. The Splunk Perspectium integration is a single-direction (ServiceNow to Splunk) integration that can leverage either bulk or dynamic shares for the collection of ServiceNow data into Splunk HTTP Event Collector. Both the Splunk Enterprise and Splunk Cloud platforms can be configured for the DataSync for Splunk integration.



## Get started with DataSync for Splunk

Take the first step in syncing your ServiceNow data with Splunk's HTTP Event Collector.
