

Share display values

Fluorine

By default, ServiceNow [display values](#) for [reference fields](#) and [choice lists](#) will not be shared out in your [dynamic shares](#) and [bulk shares](#). However, you can enable the sharing of display values for these fields in Replicator properties.

NOTE: Display values do not ensure referential integrity when used to join with other tables. To ensure accurate joining between tables, always rely on the actual `sys_id` value in the reference field instead.

Prerequisites

! First, you will need to follow the steps to [get started with Replicator](#).

Procedure

To share display values for reference fields and choice lists with your dynamic shares and/or bulk shares, follow these steps:

1

Log into your sharing ServiceNow instance and navigate to **Perspectium > Replicator > Properties**.

2

Check the box labeled **Enable replicator to add display value fields (prefixed with 'dv_') for reference and choice fields**. Then, scroll to the bottom of the form and click **Save** to save your changes.

The screenshot shows the ServiceNow interface. The top header is 'servicenow Service Management' with a user profile 'System Administrator'. The left sidebar has a search bar with 'replicator' and a list of items: 'Perspectium', 'Replicator' (expanded), 'Homepage', 'Properties', and 'Ready to Run'. The main content area is titled 'Perspectium Replicator Properties'. It contains three sections: 'Enable messages to arrive at this instance' (checked), 'Enable to allow the Replicator Inbound messages to go to a state of ready instead of being consumed immediately' (unchecked), and 'Enable replicator to add display value fields (prefixed with 'dv_') for reference and choice fields' (checked). A red arrow points to the checked checkbox in the third section, with the text 'Check to share display values' next to it.
