

Replicator Tools

Fluorine

The **Tools** module under **Replicator** provides several options for your InstanceSync, ServiceBond, and DataSync integrations for ServiceNow.

Download Table Schemas

Download your ServiceNow instance's table schemas and build the tables in a database for a [DataSync for ServiceNow integration](#) with the [DataSync for ServiceNow Agent](#).

Download share configurations

Download your ServiceNow instance's [dynamic share](#), [bulk share](#), [scheduled bulk share](#), and [table map](#) configurations.

Table Compare (ServiceNow to ServiceNow & ServiceNow to Database)

Compare tables between two ServiceNow instances or between your ServiceNow instance and database to determine if any data is out-of-sync.

Replicator Tools

Download Table Schemas

Export the table schemas that your Replicator Agent will use to build the tables on its database to zip file

Download Share Configurations

Export your bulk shares, dynamic shares, scheduled bulk shares, and table maps to easily transfer them to a different instance

Table Compare: ServiceNow to ServiceNow

Compare the records in tables from one ServiceNow instance with the same records in another ServiceNow instance

Table Compare: ServiceNow to Database

Compare the records in tables from one ServiceNow instance with the same records in your database
