

Use audit delete listener

Fluorine

If choosing to dynamic share on **deletes**, you may want to enable the **Use Audit Delete Listener** feature. This feature will ensure that records that may have bypassed the ordinary **delete** business rule are included in your dynamic share.

NOTE: **Delete** business rules are often bypassed if a business rule that calls **setWorkflow('false')** or **cascade deletes** runs.

Prerequisites

⚠ First, you will need to [create a dynamic share](#).

Procedure

To use the audit delete listener for your dynamic share, follow these steps:

1

Access your dynamic share

Log into your sharing ServiceNow instance and navigate to **Perspectium > Replicator > Dynamic Share**. Then, click into the dynamic share that you want to use the audit delete listener for.

2

Check Use Audit Delete Listener

Scroll down to the **Trigger Conditions** tab. If **Delete** is checked, an option to **Use Audit Delete Listener** will automatically appear. Check this box to enable the audit delete listener to check for bypassed **delete** business rules when running your dynamic share.
