

Filter conditions

Fluorine

For both [dynamic shares](#) and [bulk shares](#), you can create **filter conditions** to share data only when certain conditions are met. For more information about creating filter conditions in ServiceNow, see [condition builder](#).

Prerequisites

⚠ First, you will need to [create a dynamic share](#) or [create a bulk share](#).

Create filter conditions

To create filter conditions for a dynamic share or bulk share, follow these steps:

1

Access your dynamic share or bulk share

Log into your sharing ServiceNow instance and navigate to **Perspectium > Replicator > Dynamic Share** or **Perspectium > Replicator > Bulk Share**. Then, click into the dynamic share or bulk share that you want to create filter conditions for.

2

Build your conditions

Click the **Filter and Enrichment** tab. Choose a field to filter on from the **choose field** dropdown. Then, add an **operator** for your filter condition statement (For a list of ServiceNow operators and their descriptions, see [operators available for filters and queries](#)). Finally, enter/select a value for your filter condition statement.

3

Click update

Near the bottom left-hand corner of the form (just above **Related Links**), click **Update** to save the changes to your dynamic share.
