Open Splunk HTTP Event Collector port to the Perspectium Integration Mesh

Krypton

To enable your **Splunk HTTP Event Collector** to listen for data that is being shared from your ServiceNow instance, you will need to open your HTTP Event Collector port to the **Perspectium Integration Mesh** that is running Perspectium's DataSync for Splunk meshlet.

ℹ **NOTE**: The Perspectium DataSync for Splunk meshlet runs in the Perspectium Integration Mesh environment, if you want to run the meshlet in your environment, contact Perspectium Support for system requirements.

Prerequisites

⚠ First, you will need to create a ServiceNow bulk/dynamic share for Splunk.

Procedure

To determine your Splunk HTTP Event Collector port to the Perspectium Integration Mesh, follow these steps:

1 Log into Splunk and navigate to **Settings** > **Data inputs** from the top left-hand side navigation menu.

2 Click **HTTP Event Collector** under **Type**.

3 On the right-hand side of the screen, click **Global Settings**.

4 In the **HTTP Port Number**, note the port that the Splunk HTTP Event Collector is running on. Have your system administrator verify this port is open and accessible by the Perspectium Integration Mesh.

ℹ **NOTE:** The default port that is set when initially configuring your Splunk HTTP Event Collector is **8088**.

For more information on configuring your HTTP Port Number in Splunk, see enable HTTP Event Collector.
