

DataSync

Fluorine

DataSync via the **Perspectium DataSync Agent** is a single-direction integration that allows you to synchronize your ITSM or CRM data with **on-premises databases and on-premises applications**. The Perspectium DataSync Agent executes handlers that consume, transform, and route data from your ITSM or CRM tool and write that data to external data storage. DataSync gives you the power to extract core ITSM and CRM data and place that information in external data sources for data warehousing, analytics, and reporting.

DataSync for ServiceNow

Sync your ServiceNow data to your on-premises database or application using the Perspectium Replicator Agent or Repeater Agent.

Replicator for Salesforce

Sync your Salesforce data to your on-premises database using the Perspectium Replicator Agent.

DataSync for Splunk

Sync data from your ServiceNow instance to Splunk's HTTP Event Collector.

DataSync Agents

DataSync Agents facilitate the transmittal of data from your app to your database. Choose a DataSync Agent for your app-to-database integration from the list of Agents below.

DataSync for ServiceNow Agent

DataSync Agent for Salesforce
